Where a payments SDR team should focus

Findings from a public-website scan of 389 Indian D2C, edtech and SaaS businesses (363 crawled) · Merchant Lead Intelligence Engine · Oct 2026

1. In D2C, the checkout layer is the battleground, not the gateway

84% of Shopify stores (129/154) run a third-party checkout layer. GoKwik alone is on **90 of 202** D2C sites (45%). Brands that already pay to improve conversion are the easiest to talk to about payment success rates behind that checkout.

2. Where a gateway is visible, it is almost always Razorpay

A gateway is visible on only 32 sites (payment scripts usually load at the final step). Razorpay appears on **28** of them, 20 via Razorpay Magic Checkout. **28 merchants** show a single gateway with high or medium confidence, a direct fit for the backup-route pitch. Cashfree is visible on 1.

3. SaaS selling abroad is the second-best pool

51% of crawled SaaS companies (41/81) price for international buyers, and 17 of those also sell subscriptions. They need cross-border collections and recurring billing, not a gateway swap.

4. Edtech is nearly invisible on the public web

Only 2 of 80 edtech sites show subscription pricing and 4 show a gateway, while 41% push visitors to an app. Website signals can't qualify this segment. It needs app-store research and counsellor-led discovery calls.

Tier A leads	D2C	SaaS	Edtech	Total
Count	31	23	1	55
Share	56%	42%	2%	100%

Recommendation

Put SDR capacity on the **31 Tier A D2C brands first** (every one of them runs GoKwik or Razorpay Magic). Lead with a backup route for sale spikes plus COD-to-prepaid payment links. Then work the **23 Tier A SaaS companies** on cross-border collections. Don't spend outbound time on edtech until there's a better data source than the website.

Limitations. A hand-built sample, not representative of all Indian merchants. Public pages only, robots.txt respected, and 25 sites blocked the crawler. Gateway recall is limited because gateways load at the payment step. Funding data is not yet filled in, so tiers will shift once it is. Scores and openers are generated by transparent rules in config/icp.yaml.
